Re: _____

The boulevards adjacent to your street have been reseeded or sodded as part of the reconstruction project. Under the terms of our contract with the City of Fargo, our seeding subcontractor was required to maintain the newly seeded areas by watering as necessary to establish growth.

This maintenance period has now expired, so the newly seeded or sodded areas will not be watered by others any longer. The grass is growing, but without occasional watering, it will likely dry out and fail to survive.

This note is to remind you as the homeowner or tenant that it will be up to you to continue to maintain the newly established turf. It is generally recommended that the lawn receive moisture equivalent to 1" of rainfall per week. Please note that any City watering restrictions do not apply to newly seeded areas such as yours.

Watering the subject area will greatly improve the chances for a healthy lawn.

Thank you for your consideration.
